

Email Market Analysis

This project is based upon a dataset that is taken from the list of the subscribers for the email newsletters and it can be used for the analysis for email marketing purposes. This dataset has 10000 records and it contains various information patterns and constraints like physical features, locations and status of individuals who have subscribed the email newsletter

Preprocessing

Remove column1 and Type and then remove the null values from each column

Split the Enrolled-on column into Date and Time

Capitalize each word on gender and Living status

Dashboard

Create a donut chart on count of gender

Create a bar chart on count of status

Create a bar chart on people signed up by marital status (Count of marital status)

Create a donut chart on living status (Count of living status)

Create a bar chart of top 5 state that people signed up (Count of States)

Create a bar chart of top 5 city that people signed up (Count of city)

Create a waterfall chart on Enrolling Date for visualising the increment and decrement of the value

Create a clustered column chart no Enrolling Time (Count of Enrolling Time)

Create a card on number of active users

Create a card on count of state

Create a card on count of gender

You can customize the format of the chart based on your wish
